POWER BI · SQL · DAX

# Credit Card Weekly Dashboard

Weekly financial performance of credit card customers and transactions

Pallavi Saini

PROJECT OBJECTIVE

# One weekly view of credit card operations, so stakeholders can monitor performance and spot trends early.

BUILT WITH

- SQL
- Power BI
- DAX
- Excel / CSV

HOW IT WAS BUILT

# From raw files to dashboard

**1**

### Prepare CSVs

Customer and transaction files

**2**

### SQL tables

Create tables and import the data

**3**

### Connect Power BI

Load both tables into the model

**4**

### DAX fields

Groups, week number, revenue

**5**

### Dashboard

Visuals, filters and insights

### DAX used

AgeGroup and IncomeGroup bucket customers. Revenue = annual fees + transaction amount + interest. Current and previous week revenue give the week-over-week change.

DAX QUERIES USED

# Transaction table: cc_detail

```
Week_num2 = WEEKNUM(cc_detail[Week_Start_Date])

Revenue = cc_detail[Annual_Fees]+cc_detail[Total_Trans_Amt]+cc_detail[Interest_Earned]

Quater Label = "Q" & cc_detail[Qtr]

Current_week_Revenue = CALCULATE(SUM(cc_detail[Revenue]),FILTER(
    ALL('cc_detail'),
    cc_detail[Week_num2]=MAX(cc_detail[Week_num2])))

Previous_week_Revenue = CALCULATE(SUM(cc_detail[Revenue]),
FILTER(
    ALL('cc_detail'),
    cc_detail[Week_num2]=MAX(cc_detail[Week_num2])-1))
```

DAX QUERIES USED

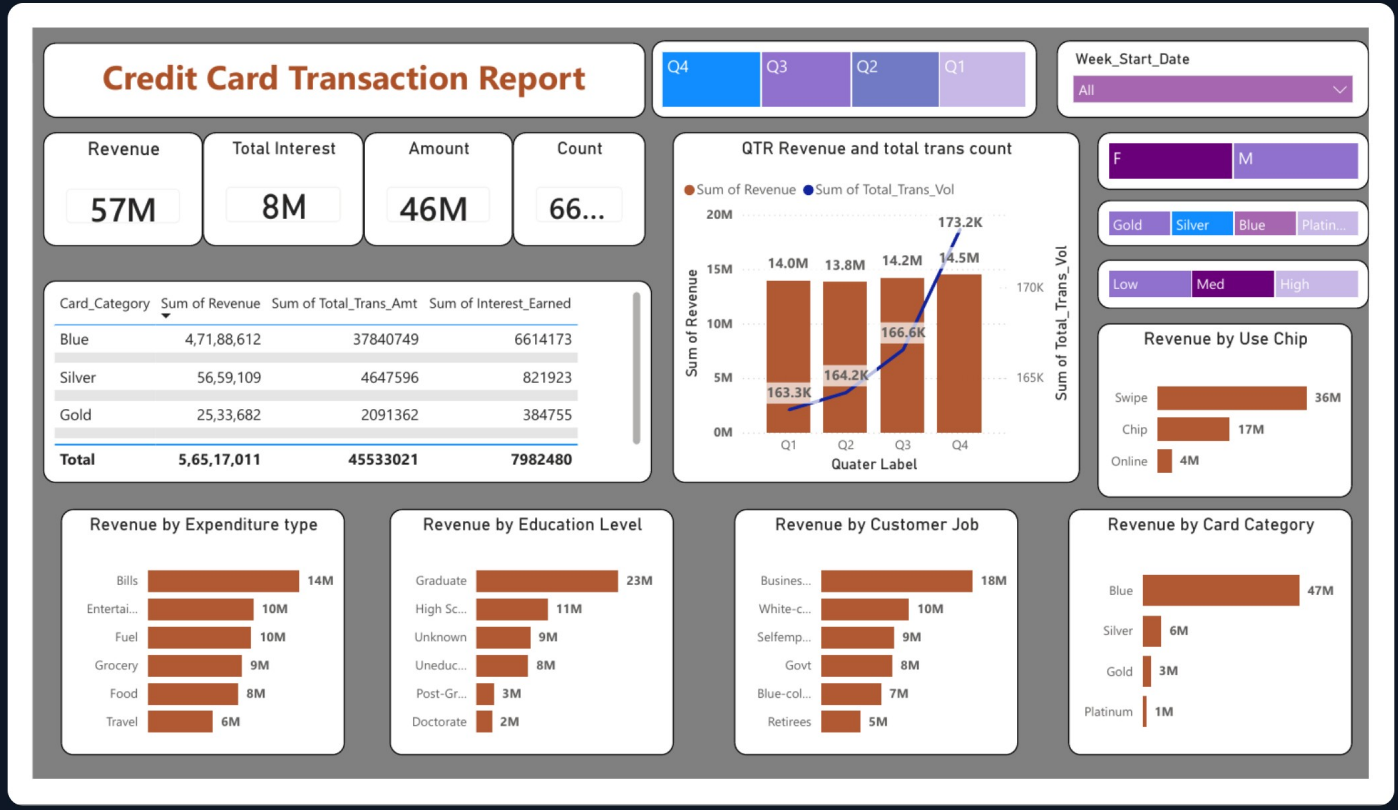

# Customer table: cust_detail

```
AgeGroup = SWITCH(TRUE(),
cust_detail[Customer_Age]<30,"20-30",
cust_detail[Customer_Age]>=30 && cust_detail[Customer_Age]<40,"30-40",
cust_detail[Customer_Age]>=40 && cust_detail[Customer_Age]<50,"40-50",
cust_detail[Customer_Age]>=50 && cust_detail[Customer_Age]<60,"50-60",
cust_detail[Customer_Age]>=60,"60+",
"unknown")

IncomeGroup = SWITCH(
  TRUE(),
cust_detail[Income]<35000,"Low",
cust_detail[Income]>=35000 && cust_detail[Income]<70000,"Med",
cust_detail[Income]>=70000,"High",
"unknown")
```

DASHBOARD · PAGE 1

# Transaction report

## Steady quarters

Revenue stays near 14M in every quarter.

## Swipe and Blue lead

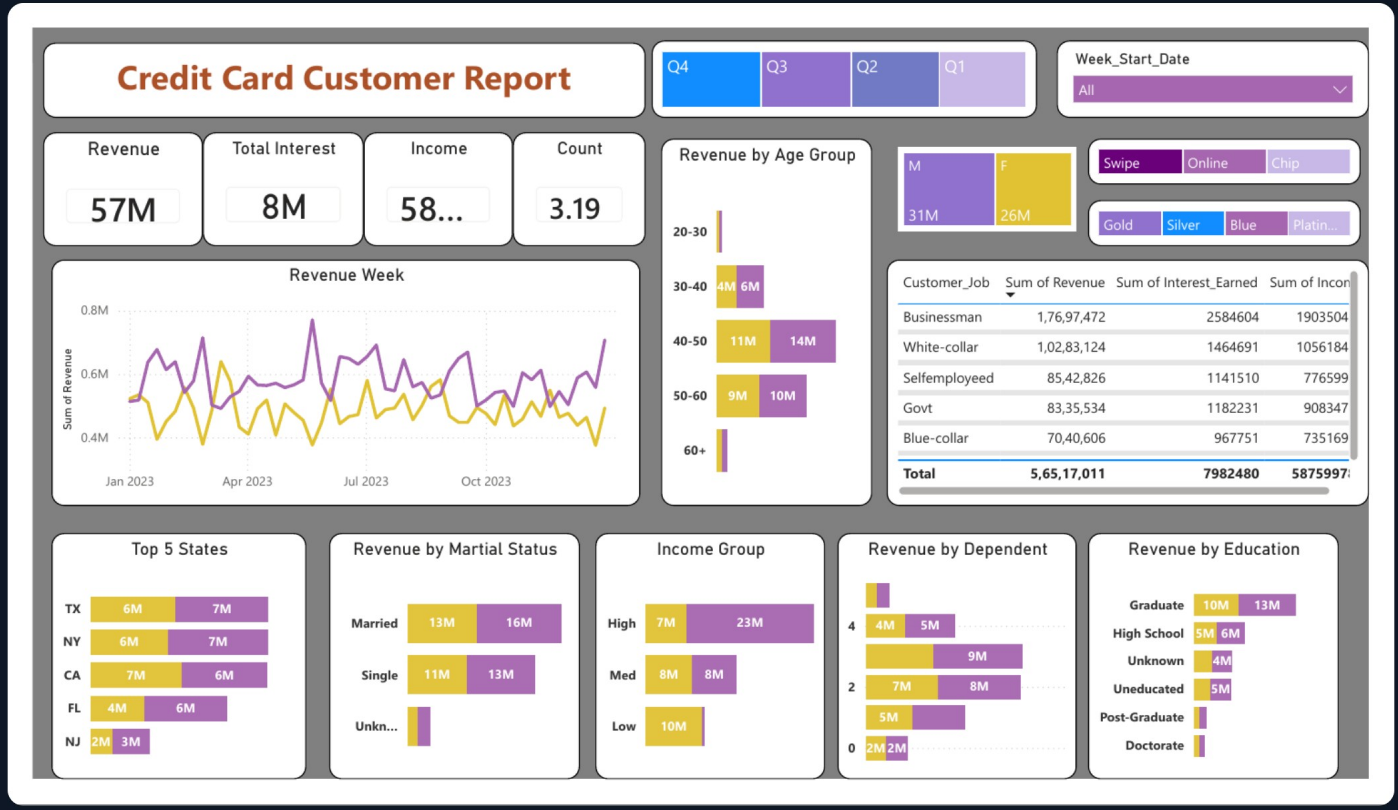

Swipe brings 36M and Blue cards 47M of revenue.

## Bills on top

Bills are the largest spend type at 14M.

DASHBOARD · PAGE 2

# Customer report

## Top states

TX, NY and CA lead revenue, then FL and NJ.

## Ages 40 to 50

This age group brings the most revenue.

## High income

High-income customers bring the largest share.

KEY INSIGHTS · WEEK 53 (31 DEC)

# What the data shows

**57M**

**Revenue year to date**

Male customers 31M, female 26M

**+28.8%**

**Week 53 revenue**

Growth over the previous week

**93%**

**Blue and Silver cards**

Share of overall transactions

**68%**

**TX, NY and CA**

Combined contribution

**57.5%**

**Activation rate**

Room to bring more cards into use

**6.06%**

**Delinquent rate**

Low, but the main risk to watch

RECOMMENDATIONS

# What the bank can do next

### Raise the activation rate

Activation is 57.5%. Use onboarding offers and reminders to bring inactive cards into use.

### Protect the core cards

Blue and Silver carry 93% of transactions. Keep them strong before pushing other card types.

### Monitor delinquency by state

At 6.06%, start with Texas, New York and California, where the volume is highest.

### Grow female customer revenue

Female customers bring 26M against 31M from male customers. Tailored offers can narrow the gap.

# Thank you

**What I learned**

- Importing CSV data into SQL and connecting it to Power BI
- Writing DAX for calculated columns and week-over-week measures
- Designing a dashboard that tells a clear story
